

Airbnb | Revenue, guide and value

Status: UNSIGNED local review. Information frozen 13 September 2026; execution date 14 September. No adopted direction, target or probabilities.

Our conditional Q4 revenue is \$3,179.3m, \$18.3m (+0.58%) above the captured Street revenue estimate. The \$3,123.4m implied guide uses a separate cushion assumption. Comparing that guide directly with revenue consensus does not establish a negative guide surprise. Explicit expectations for management's guide remain unavailable. [R,Q]

Compare the same forecast object

Q4 2026 object	USDm	Interpretation
Own revenue R / Street revenue S	3,179.344 / 3,161.021	Yahoo / LSEG-family revenue; 13 Sep 15:20 UTC
Revenue gap R - S	+18.322	+0.5796% of Street revenue; same basis
Own implied guide G	3,123.419	R / (1+c); c=1.7905%, trailing-eight median
G - S	-37.602	Different objects; diagnostic, not guide surprise
Hypothetical Street guide S / (1+c)	3,105.419	Assumes our cushion; not observed consensus

Retain the tested fixed rule

Revenue = seasonal lambda x [2/3 prior-quarter GBV + 1/3 two-quarters-prior GBV]. L3 accepted implementation and completed validation; estimating a shared lag weight failed its preregistered promotion hurdle. Existing K0 seasonal estimation stays in production. The all22 weight 0.786478 and newly fitted fixed-OLS coefficients are descriptive only. [C]

Chronological window	Free RMSE, USDm	Matched fixed OLS	Free/fixed; result
W1 (n=14)	63.20	54.23	1.1654 / FAIL
W2 (n=10)	57.39	56.52	1.0155 / FAIL

Notes: W1 is 2023Q1-2026Q2; W2 is 2024Q1-2026Q2 and nested. Origins are letter-close with newly printed GBV. Errors do not measure pre-release guide skill or include today's forecast-Q3-GBV and cushion risk. The shared weight is not a measured booking-cohort probability. Three full accepted charts and their limitations accompany this memo. [C,Q]

The financial consequence is conditional

Operating assumptions flow into cash and value

Conditional case	FY27 revenue, \$m	EBITDA, \$m	FCF, \$m	13 Sep 2027 / share
Soft envelope	15,741	5,625	5,364	\$177.33
Reference	15,952	5,808	5,537	\$182.87
Firm envelope	16,050	5,900	5,624	\$185.68

Soft uses ADR mean reversion, lambda -0.10pp and 3.88% Q4 cushion; firm uses alternative nights A, lambda +0.10pp and the median cushion. Weight stays 2/3. These are assumed envelopes, not CIs or probability cases. Separate +/-1% net after-hedge revenue sensitivities affect Q3/Q4 2026 and Q1 2027, then propagate changed annual bases; they are not measured FX and are not combined with lambda stresses. [R,M]

The reference is \$182.87 per share at 13 September 2027, twelve months from the frozen information date: 16.5x full FY27 EBITDA plus \$10,029.1m net cash, divided by 578.85m diluted-share proxy. Cash and shares use FY26 end plus 256/365 of FY27 net flows, assumed uniform within year. The later 31 December value is \$184.66; the \$1.80 difference changes only balance timing. The multiple is inherited and conditional. [M,V]

Notes: FY27 net income \$3,355m. FCF = adjusted EBITDA + net interest - cash taxes + change in unearned fees + working-capital residual - capex. Cash taxes \$542m; capex \$48m; unearned change 0. Total EBITDA addbacks include D&A; GAAP operating proxy subtracts SBC and total addbacks once. Customer funds are excluded. Share mechanics inherit the \$181.94 price anchor dated 4 Sep 2026; it is not a return denominator. Later-quarter growth and costs remain inherited assumptions. [M,V]

Evidence that can and cannot change the decision

L3's 108-file bundle and 1,187 row dispositions are verified. FX scenario arithmetic reconciles, but matching pre-hedge baseline, signed H/H_new, and RNPL recognition exposures remain unidentified. Current cohort inputs cover Q3 only, not Q4/Q1. Incremental FX stays null, not measured zero. Fee theta is unavailable (0/6 scheduled captures); NCLH transfer fails and supplies no ABNB adjustment; hotels remain comparators. [S]

A2 remains PARTIAL with no executable edge; its historical sign test compares guide with revenue expectations, not explicit guide expectations. B2 fails (5/9 and 4/7 versus 70%). The unsigned November card preserves rounding-aware lambda, payment-balance, ADR and exact management-wording tests. Missing evidence is ABSENT; no rule automatically trades or validates the opposite thesis. [E,F]
